2021.05.18 Operator database tables

These database tables allow us to clean up scraped operator names from 3rd parties and detail parent companies. The current version is based on the table shown here: 📄 Operator Names Look-Up Tables.

Database name: **pads**

Table name: **operators**
Table description: This is our *master* operators table containing information on all the operating companies included in our datasets. It contains a unique row per operator with a cleaned up version of the operator name which should be the version that appears in all client-facing data.
Table attributes:

- **id** (int): ID
- **operator** (str): (Cleaned) operator name
- **parent_operator_co** (str): Operator parent company name
- **company_type** (str): 'Public' or 'Private'.

Table name: **operators_lookup**
Table description: This table contains all the variations on each operator name scraped from third party data sources. Each row is linked to the corresponding row of the master operator table with the latter table's ID.
Table attributes:

- **id** (int): ID
- **operator** (str): Operator name scraped from a 3rd party dataset
- **tbx_operators_id** (str): ID of the corresponding row from the **operators** table.
